PrimeTank Regulation

Share your project with us and meet ThePrimeagen!

Share with us your **ground-breaking, incredible, innovative** projects using **either Azion or Turso technologies** and have them reacted **live by ThePrimeagen** himself and other tech influencers and win prizes!

Rules

Three projects will be selected to be presented to the live audience and appraised by a board with ThePrimeagen and 2 other Influencers.

- Impress our evaluation committee with a project using either Azion or Turso (or both!)
- Use our [Typeform](#) to submit:
  - Your name and email;
  - Links for the project domain/URL and GitHub repo; and
  - 1-minute video explanation of how your production works.
- If you're not physically present at the event, don't worry. Your project will also be eligible for consideration.
- Your project should be: interesting, running live (not just a PowerPoint - we want to see it in action!), and profitable (maybe ThePrimegean can spend some coins? - we'll see).
- **Deadline: Apr 28, 2024**

We also plan to give a **free event ticket** (*travel and accommodation not included*) to those chosen so they can pitch their project live. If they have already bought the event ticket, they will be reimbursed.

Presentation:

You will have 5 minutes to present your idea on the day of the event.

- You should show your solution **running live** and give an overview of its development by showing the GitHub repo (mandatory).

- You are free on how to present your idea, but if you would like to use a presentation (optional) you can use **up to 5 slides**.

- There will also be 10 min of Q&A but don't worry, we will send you some questions before the event so you should be ready to answer.

Prizes

A trophy + **Azion Credits** + **Turso Credits**

Useful Tips

- Feel free to use Azion Templates with Turso:

[Turso Starter Kit](#)   [Next.js App + Configurations + Turso](#)

Turso Starter Kit

Integrate a Turso database, created using Turso's LibSQL SDK, into an edge function

Next.js App + Configurations + Turso

Build a Next.js application with App Router, custom configurations, and support for Turso…

- Need troubleshooting? More info? We can help! Find us [on Discord](#)!

Good luck!
See you on May 09!
